FWS Geospatial Training Workshop

CSP 7304

Course Description
This 5-day workshop is an opportunity for intermediate to advanced geospatial practitioners to receive focused, hands-on training that is not otherwise offered at the NCTC. Training options will include a full-day course in ArcGIS Pro, a Collector for ArcGIS course for instructors, and multiple 2-4 hour intensives focused on a variety of skills and applications in Remote Sensing, Data Management, Spatial Analysis, and Web-based and Mobile GIS. In addition to the training modules, the workshop will feature morning plenary lectures, lightning round talks, and “What’s New” software demonstrations. Lecture topics will range from geospatial data management to FWS briefings on regional and national program efforts. The workshop also will include agency program breakout meetings and an FWS User Map and App Exhibition.

Objectives

✓ Receive hands-on training and practice using the latest geospatial software, equipment and technology applications
✓ Cultivate professional relationships and collaborate with other FWS geospatial practitioners
✓ Discover new program initiatives within the FWS, including national data integration strategies to promote information sharing among agencies
✓ Share knowledge, expertise and perspectives among your contemporaries and subject matter experts
